

Innover Digital Launches AI-Powered Logistics Control Tower to Enable Predictive Operations

NEW YORK — June 15, 2025 — Innover Digital today announced the launch of an AI-powered Logistics Control Tower, designed to give organizations a unified view of shipments, transportation networks and logistics operations while enabling faster, proactive responses to disruptions.

The solution brings together shipment, carrier, transportation, IoT and operational data from multiple sources to provide a comprehensive picture of network performance. Advanced analytics and AI continuously analyze this data to detect anomalies, identify emerging risks and predict potential disruptions before they impact operations.

Beyond visibility, the platform enables automated alerts, exception prioritization, route performance monitoring, carrier performance analysis and proactive intervention, helping logistics teams prioritize critical events and respond with greater speed and precision.

With this launch, Innover Digital is helping organizations move beyond traditional logistics visibility toward intelligent, predictive operations—transforming complex network data into actionable intelligence that improves efficiency, resilience and service reliability.

About Innover Digital

Innover Digital is a technology and digital transformation company helping organizations harness data, analytics, AI and automation to solve complex business challenges. Its solutions help enterprises improve operational visibility, optimize processes and turn data into actionable insights across industries.
