

Innover Digital Recognized for Excellence in AI-Powered Logistics Analytics

Dear Media Friends,

We're excited to share that Innover Digital has been recognized for the fourth consecutive year by Supply & Demand Chain Executive through its "Top Supply Chain Projects" awards. The recognition reflects the real-world impact of our analytics and digital solutions in helping organizations navigate increasingly complex logistics and transportation operations

As logistics networks face increasing disruption, rising transportation costs and growing customer expectations for visibility and predictability, organizations need faster, smarter ways to monitor operations, anticipate risks and respond to changing conditions. Innover helps organizations leverage advanced analytics, AI, automation and real-time data to improve shipment visibility, optimize transportation and capacity, identify risks and enable proactive decision-making.

Innover's logistics solutions address critical industry priorities including AI-powered route optimization, logistics control towers, predictive disruption management, warehouse and inventory optimization, carrier performance and real-time operational visibility—helping organizations move from reactive operations toward more intelligent, agile and resilient logistics.

The fourth consecutive recognition underscores the consistent impact Innover's teams create by helping organizations turn fragmented operational data into actionable intelligence, improved efficiency, and measurable business outcomes.

Our team is available to share additional insights, client perspectives and expert commentary on the evolving logistics landscape, including AI-powered

transportation, intelligent operations, real-time visibility and analytics-led transformation.

Best Regards,

Corporate Communications Team
